

I respectfully request that the FCC denounce any attempts by the NAB to filter satellite radio content (NAB's petition 04-160) . This is a paid service and as such represents my rights as a consumer to access information that I request. Satellite radio providers should not be prohibited from offering local content from paying consumers. It would seem to be an unfair practice to deliberately block a premium service from providing local content to its paying subscribers. Satellite radio is a valuable conduit for information and content not available elsewhere and is worth every penny I and other consumers spend for it. Please do not cave in to special interest groups and lobbyists who wish to promote unfair trade practices and censorship. I value my freedom as an American and resent any attempts by groups or the government to limit my right to information.

Thank you for your consideration,

Arthur Crowe
